

BOOKS BY THE AUTHOR

Algebra 1 Vocabulary

Adding and Subtracting Polynomials

ACROSS

- 3 multiplying a term outside a parenthesis grouping into each term inside the grouping) Like this: $a(b + c) = ab + ac$
- 5 The result of subtraction
- 7 This math property states that you can add numbers in any order. Also that you can multiply numbers in any order.
- 9 numbers and/or variables separated by + or - signs that make up a mathematical expression.
- 10 A polynomial with two terms
- 12 An equation where variables represent known values.
- 13 A polynomial with three terms
- 15 A mathematical phrase that contains operations, numbers, and/or variable.
- 19 A value that does not change.

DOWN

- 1 This math property states that you can add or multiply regardless of how the numbers are grouped.
- 2 number in front of a variable
- 3 This math property states that if a grouped terms are multiplied by a number, that number multiplies each term of the group.
- 4 The result of addition.
- 6 A math expression made up of terms separated by + or - signs.
- 8 terms whose variables and their exponent-level are the same.
- 11 The result of multiplication
- 14 an expression (or polynomial) with only one term.
- 16 The number system set that contains all rational and irrational numbers. All the numbers we use.
- 17 The set of whole numbers and their opposites, including 0. Like this: $\{\dots-3, -2, -1, 0, 1, 2, 3,\dots\}$
- 18 A comparison of two quantities by division. Like a fraction.

WORD BANK: ASSOCIATIVE, BINOMIAL, COEFFICIENT, COMMUTATIVE, CONSTANT, DIFFERENCE, DISTRIBUTIVE, DISTRIBUTIVEPROPERTY, EXPRESSION, INTEGERS, LIKETERMS, LITERAL, MONOMIAL, POLYNOMIAL, PRODUCT, RATIO, REAL, SUM, TERM, TRINOMIAL
